

APPLIED AI · ONE-DAY HACKATHON

Applied AI Hackathon.

Sintra, Portugal · 24 July 2026 · Hosted by Swans

WELCOME · SINTRA

Welcome to Sintra.

We're Swans. We build AI for personal-injury law firms in the US, and today's challenge isn't invented for a hackathon. It's a real problem our clients pay real money to solve.

Today is a **build day and a social day**. Food, coffee, and interesting people in every direction. The challenge is sized for a good day, not a death march.

WHAT'S IN IT FOR YOU

Three reasons to build.

PRIZES

1st **€1,000**
2nd **€700**
3rd **€300**

OWNERSHIP

100%

Of what you build is yours. Take it, ship it, put it in your portfolio.

YOUR JUDGES

Trial attorneys and AI founders.

The real buyers of this software, and people who know what a good AI product looks like, using your app with their own hands.

PERSONAL-INJURY LAW IN 90 SECONDS

All the law you need.

01

Someone gets hurt

A car crash is the classic case. They hire an attorney.

02

The records pile up

Every ER visit, MRI, therapy session, surgery. Often thousands of pages.

03

They become a story

What happened, how bad it was, how long recovery took. The treatment story.

04

Told three ways

-  A jury
-  The client
-  An insurer

THE PROBLEM

SOLVED

Thousands of pages, into a structured table of events.

AI reads the records, summarizes every encounter. This part is basically done.

There is no right answer. Every experienced attorney has strong, conflicting opinions about what a good timeline looks like. You invent your answer, the judges react to it.

TODAY'S PROBLEM

That table, into a visual you can feel.

How do you make a jury feel eighty medical events? Show an adjuster the truth in ten seconds? Nobody has solved this well.

THE CHALLENGE, IN ONE SENTENCE

Build an app that digests an Excel of structured medical events and produces a **visual, usable timeline of the client's treatment.**

 **The Excel**

Whatever visual form tells the story best

What this is **NOT**: a document-parsing challenge. No PDFs, no OCR, no records digestion, that already happened. You start at a clean Excel and end at a visual.

YOUR INPUT · THE EXCEL

One Excel per case.

One row = one medical encounter, with a written **summary**. That summary is your content. Values like providers and medicine types vary from case to case, so **don't hardcode the sample file**, your app works with any Excel in this format.

Not in the file: the accident date.

The Excel only knows medical encounters. An app that lets the attorney add that milestone beats one that doesn't. Keep the end user always in mind.

	A	B	C	D	E	F	G	H
1	Encounter Date	Primary Provider	Facility	Body Parts	Medicine Type	Record Type	Summary	Link To Pdf
	06/17/2022	Kristina Eberly, MSN-FNP-BC	1400 West Main Street, Bellevue, OH	Heart, Back, Lower Back, Abdomen, Genito-urinary System	Internal Medicine	Encounter Note	Subjective: The patient presented for a commercial driver medical certification examination. He denied a history of head/brain injuries, seizures, eye/hearing problems, heart disease, high cholesterol, lung disease,	pdf
2	04/12/2023	Erik C. Schumann, PA-C	Fisher-Titus Medical Center	Back, Lower Back	Radiology	Imaging Report	Body Part: Lumbar spine CT without contrast. Impression: No acute fracture or malalignment was identified in the lumbar spine, with maintained vertebral body and intervertebral disc heights; a disc bulge was suspected at L4-L5, mild facet arthropathy was noted in the mid and	pdf
3	04/12/2023	Erik C. Schumann, PA-C; Astrit H. Hajdari, MD; William L. Ferber, MD; Robert J. Steffy, DO	Fisher-Titus Medical Center	Foot, Knee, Shoulder, Ankle, Back, Lower Back	Emergency Medicine	Encounter Note	Subjective: The patient presented after a work-related motor vehicle accident where he was driving 45 MPH and struck another vehicle. He reported pain in his right leg, right ankle, right knee, lower back, and left shoulder. He denied hitting his head, chest pain, shortness of breath,	pdf
4								

A COMPLETE SUBMISSION

The floor.

- 01 Load the provided Excel ✓
- 02 Parse it into structured events ✓
- 03 Render a clear timeline where each event is seen ✓

Ship these three things and you have a complete submission.

That's the floor. Everything else is the ceiling, and **the ceiling is where you win.**

WHAT ATTORNEYS ACTUALLY ASK US FOR

Heard directly from clients.

"Mark the date of the crash on the timeline."

It's not in the Excel, let me add key milestones.

"Show me the before and after of the crash."

"Flag the dates of service that really matter."

The surgery, the MRI, the day treatment stopped.

"I want to export it as a PowerPoint and a PDF"

"Group the events for me."

By provider, medicine type, body part.

"Let me filter and search."

Provider, medicine type, date, keyword.

"A compact overview for a slide, and a detailed view to walk my client through."

"Click an event, open the source PDF."

"Let me rephrase a summary, by hand or with AI."

"Draft a medical summary of the whole treatment."

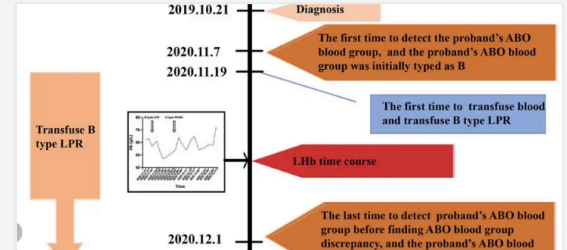

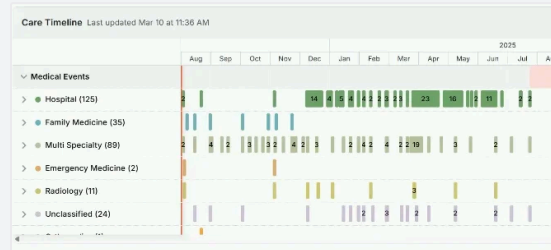

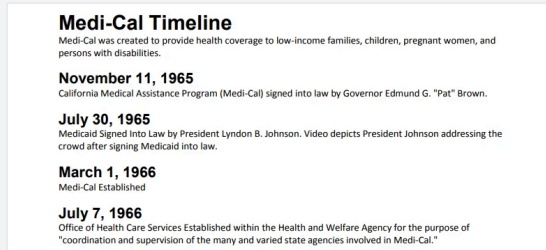

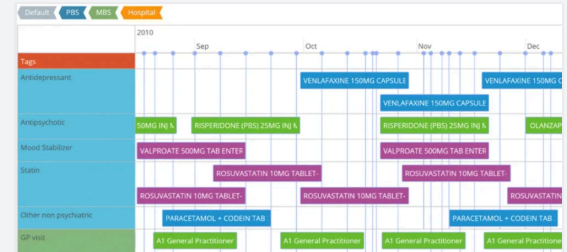

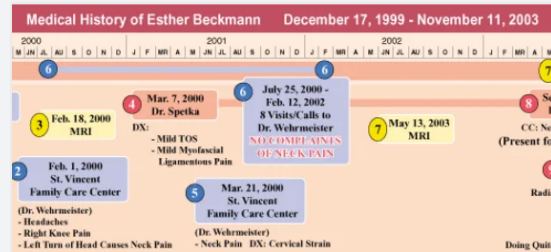

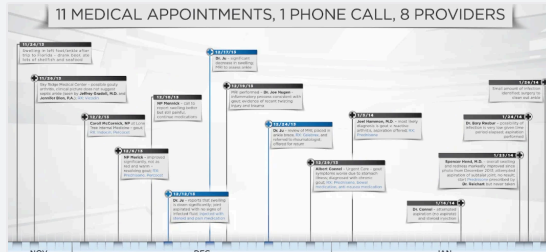

"Let me ask quick questions."

When was the first MRI? How many PT sessions?

"I want to access past timelines I've built"

Include in your solutions the features you believe are the most useful to the end user.

WHAT TIMELINES CAN LOOK LIKE

None of these are ours. This is what shows up when you google "Medical Timeline". Find and build your own solution with some of these ideas as food for thought.

RULES

Barely any.

- 👤 Work solo by default. Teams of up to three are fine, just tell us when you submit.
- 🔗 Any stack, any tools. AI-assisted coding is the way to move fast today.
- 📊 The core input is the Excel we give you. Build anything on top of it.

THE ONE RULE THAT MATTERS

Your app works with any Excel in this format. Not just the samples.

At judging time, the judges load a case file you have **never seen**. Same format, different case. If you hardcoded the samples, that's when it shows.

NEW TO BUILDING WITH AI?

No experience required.

This challenge has no tool requirements. Use any tool that helps you build.

Lovable

Vercel

Claude Code

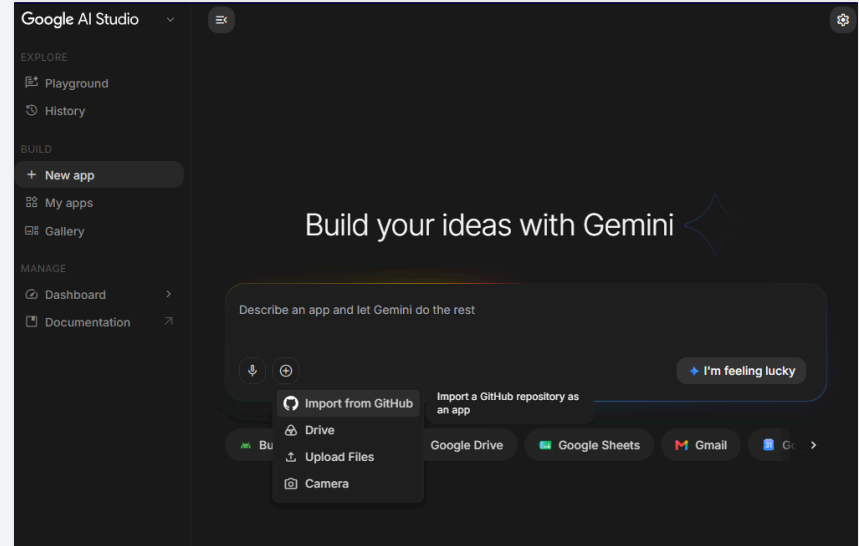

Codex

Google AI Studio

Anything else

OUR SIMPLE RECOMMENDATION

- 1 Build the main app with [Claude Code](#) or [Codex](#)
- 2 Push it to a [GitHub](#) repository
- 3 Open the repo from [Google AI Studio](#) to publish

HOW TO SUBMIT

Submit a link.

- 01 **A link to your deployed app**, open on any device. Vercel, Netlify, Streamlit, Cloud Run, all fine. Localhost is not a submission.
- 02 **A bullet list of assumptions**. "Assumes a Gemini API key." "Assumes Google Workspace."
- 03 **Where data goes, if anywhere**. This handles medical records. Client-side and lost on refresh is perfectly valid.
- 04 **Approximate cost to run one case**. Rough numbers are fine, attorneys think in per-case economics.
- 05 **One short paragraph**: what you built and what you're proud of.

DEADLINE

17:00

Link submitted.

Submit here

Submit early. Make the top five and you present in the order you submitted, first link in, first on stage.

HOW JUDGING WORKS

All day

Swans staff circulate. Show your work early, ask questions, get reactions.

17:00

Links come in. The Swans team evaluates every submission and selects the top five.

18:00

The top five present to the judges, up to 5 minutes each. Order = submission order.

Then

The judges discuss together and pick 1st, 2nd, and 3rd.

WHAT FEEDS THE EVALUATION SCORECARD

- 1 First impression.** Do you understand the client's treatment story within 30 seconds of seeing the timeline?
- 2 Timeline clarity.** Sequence, severity, and key events are readable; the story can be seen in detail if needed.
- 3 Ease of use.** You can navigate and operate it without complex instructions. The UX is well thought out.
- 4 Feature depth.** The features they chose are executed deeply, not a shallow checklist.
- 5 Real-world fit.** It would genuinely help in a real case; trial, client prep, or adjuster negotiation.
- 6 Use of AI.** AI is applied where it adds real value (summaries, Q&A, editing) not as decoration.
- 7 The keeper test.** Would its intended user keep this after the demo?

THE DAY

The Schedule

9:00	Doors open
9:30	Welcome session (this one)
9:30 – 13:00	Build
13:00 – 14:00	Lunch (provided)
14:00 – 18:00	Build, links due 17:00
18:00	Top five present to the judges
~19:00	Winners announced & shuttle back to Lisbon

GO BUILD

**Digest the Excel.
Display a Narrative.
Build something
awesome.**

🕒 Links due 17:00 · Winners at 19:00

🗨️ We're in the room all day, come talk to us.
